Scrum Meetings

The 5 important Agile Scrum meetings

Explained in simple English with a Facebook-like example

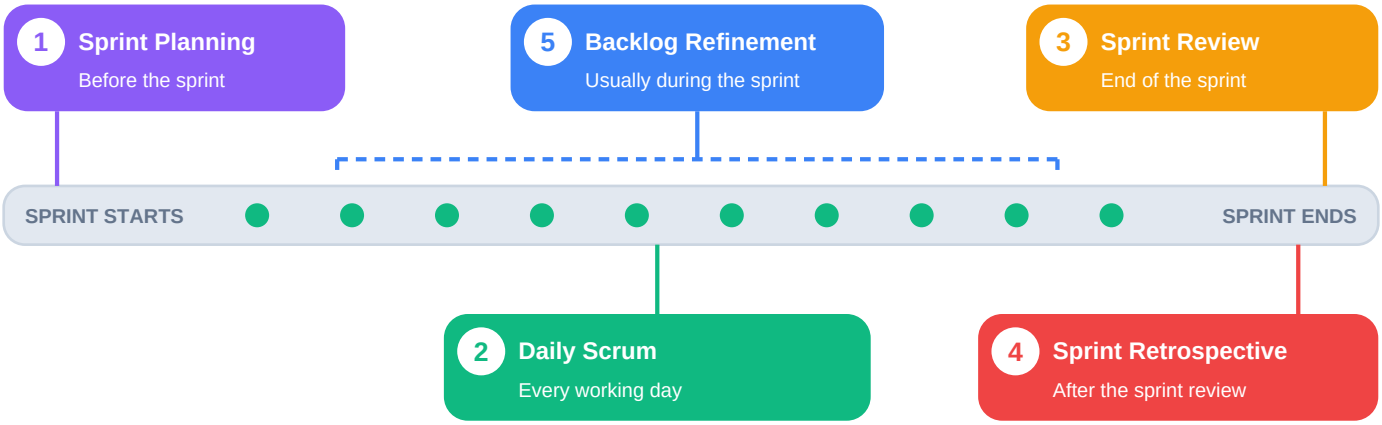
Study guide for software testers

In Agile Scrum, the team conducts different meetings to **plan work, discuss progress, show completed features, and improve the process**.

Think of a team developing a Facebook-like application. Let's understand each meeting in simple English.

5 important Agile Scrum meetings

Where each meeting happens in a sprint



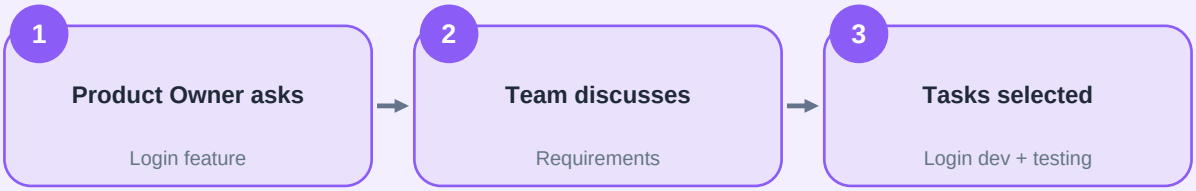
1 Sprint Planning

WHEN: Before the sprint

Purpose: Decide what work the team will complete in the upcoming sprint.

Who attends? Product Owner, Scrum Master, Developers, and testers as part of the team.

Example: The Product Owner says, "We need a login feature." The team discusses the requirements and selects login development and testing tasks for the sprint.



2 Daily Scrum (Daily Stand-up)

WHEN: Every working day

Purpose: Check progress and identify obstacles. Team members typically discuss:

Done	Next	Blocked?
What did I complete?	What will I work on next?	Is anything blocking my work?

Example: A tester says:

"Yesterday, I tested login. Today, I will test invalid passwords. I am blocked because the test server is down."

3 Sprint Review

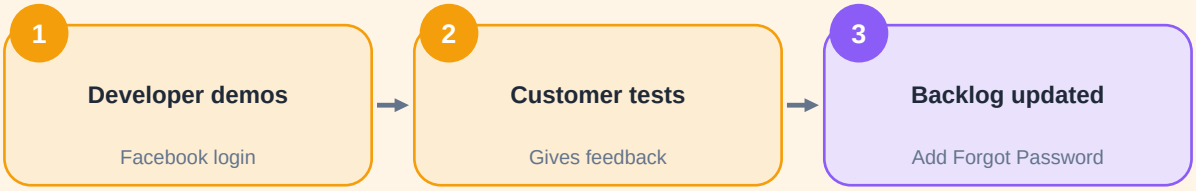
WHEN: At the end of the sprint

Purpose: Demonstrate completed work and collect feedback.

Example: The developer demonstrates Facebook login. The customer tests it and says:

"Please add a Forgot Password option."

The team discusses feedback and updates the Product Backlog if needed.



4 Sprint Retrospective

WHEN: After the sprint review

Purpose: Improve how the team works together.

Example: The team discusses three questions:

What went well?	What went wrong?	What can improve?
Login testing finished on time	Developers delivered code late	Developers should share builds earlier

5 Backlog Refinement

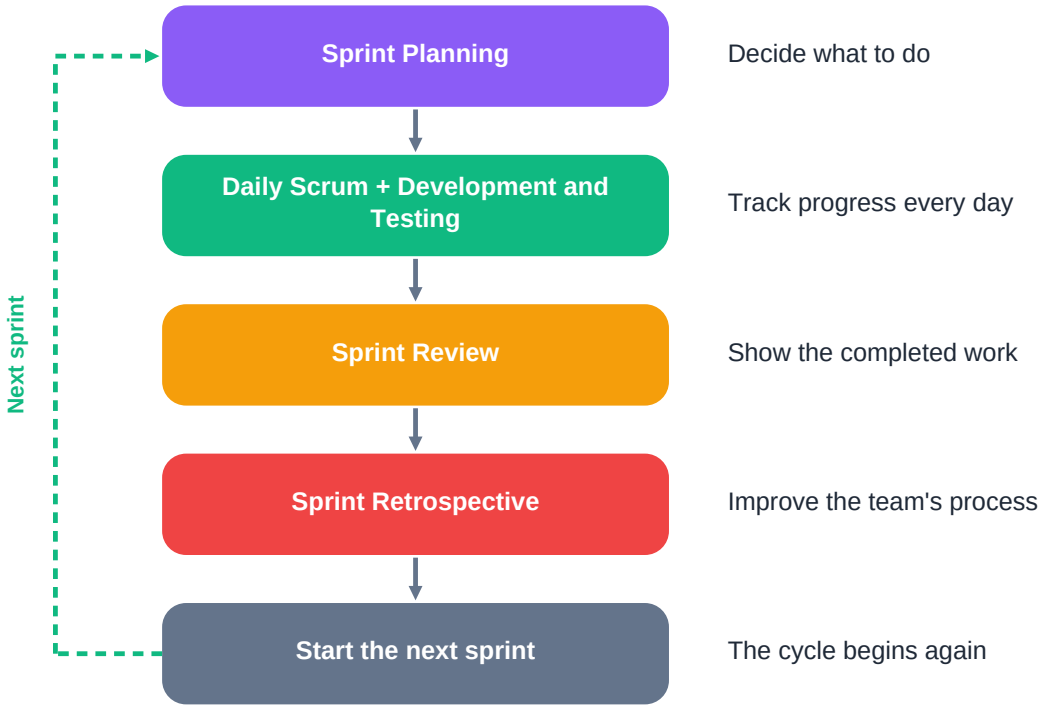
WHEN: Usually during the sprint

Purpose: Prepare upcoming work so it is clear and ready for future sprint planning.

Example: The team discusses the next Facebook feature, photo uploads. They clarify file-size limits, supported image formats, acceptance criteria, and testing requirements.

- File-size limits
- Image formats
- Acceptance criteria
- Testing requirements

Remember the order



Easy way to remember

Meeting	Main question
Sprint Planning	What will we do?
Daily Scrum	How is the work going?
Sprint Review	What did we complete?
Sprint Retrospective	How can we improve?

For a software tester: you participate in these meetings to understand requirements, plan testing, report blockers, demonstrate tested features when appropriate, and suggest improvements.
